

StockAG Rotor Meter Air Force

Description

The Rotor Meter Air Force (fan assisted) has been designed to accurately meter and apply seed or granules, ensuring a uniform application rate across the desired working width, up to 3m (subject to product and application rate). The electric fan allows more flexibility in positioning the Rotor Meter Air Force on the host machine. The applicator is frequently used for accurately spreading or effectively incorporating granular insecticides at narrow widths. The Rotor Meter Air Force is available with either a 65 or 130L hopper, and can be supplied with either Vari-Speed or i-CON Control.
