

## StocksAG Fan Jet Duo

### Description

Consisting of two applicators running in tandem, the Fan Jet Duo is typically used to broadcast slug pellets, up to a maximum of 36m (product and mounted height dependent). Typically, the Duo is mounted to self-propelled sprayers, however, the Duo can also be mounted to tractor front linkages and UTV's. (UTV vehicles subject to electrical power output). It can be rear mounted, although not recommended, on sprayer booms due to its weight.

The Fan Jet Duo is available with either 65 or 130L hopper, and can be supplied with either VS-2 or TM (Twin Metering) Control.

Please make contact before travelling to view machinery to find exact location.
